<a href="#">CVE-2015-8325</a>	The do_setup_env function in session.c in sshd in OpenSSH through 7.2p2, when the UseLogin feature is enabled and PAM is configured to read .pam_environment files in user home directories, allows local users to gain privileges by triggering a crafted environment for the /bin/login program, as demonstrated by an LD_PRELOAD environment variable.	7.8
<a href="#">CVE-2016-8858</a>	The kex_input_kexinit function in kex.c in OpenSSH 6.x and 7.x through 7.3 allows remote attackers to cause a denial of service (memory consumption) by sending many duplicate KEXINIT requests. <a href="#">CVE-2022-2272</a>	This vulnerability allows remote attackers to bypass authentication on affected installations of Sante PACS Server 3.0.4. Authentication is not required to exploit this vulnerability. The specific flaw exists within the processing of calls to the login endpoint. When parsing the username element, the process does not properly validate a user-supplied string before using it to construct SQL queries. An attacker can leverage this vulnerability to bypass authentication on the system. Was ZDI-CAN-17331.	9.8
